                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             156 a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (9114732114/gblaF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /organism-"Homo sapiens"

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                   Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB seq length: 0

Is a mild, common form of unconjugated hyperbilirubinaemia associated with reduced bilirubin glucuronidation capacity. Analysis of the genetic CC basis of GS has allowed 2 forms to be identified. One is a mild form CC associated with a homozygous 2 bp insertion in the TATA sequence CC upstream of the UCT1*1 exon 1, and the other is a more severe form CC associated with heterozygosity for a mutation which, when homozygous, CC causes Crigler Najar type 2 disease. The first form is autosomal cC recessive and the second is inherited dominatly. Patients suffering from CC GS, which is benign, may have altered metabolism of some drugs, making it CC difficult to determine if an effect is due to the drug or the syndrome. CC Drug trial efficiency would be improved if potential participants can be CC sceened for the genetic basis of GS, and eliminated or included on CC basis of them possessing or not possessing GS.

Insertion in the TATA sequence upstream of the UGTI*1 exon 1, and the other is a more severe form associated with heterozygosity for a mutation which, when homozygous, causes Crigler-Najjar type 2 disease. The first form is autosomal recessive and the second is inherited dominantly. Patients suffering from GS, which is benign, may have altered metabolism of some drugs, making it difficult to determine if an effect is due to the drug or the syndrome. Drug trial efficiency would be improved if potential participants can be screened for the genetic basis of GS, and eliminated or included on basis of them possessing or in this case, screening involves PCR amplification of the UGT gene, using the primers described in AAT79541-44.
                                                                                                                                                                                                                                                                                                                                       This sequence represents the upstream sequence, positions -611 to 9 in the patent, of uridine diphosphate glucuronosyltransferase (UCT) gene 1*1 exon 1. This gene is known to be associated with Gilbert's syndrome (GS). GS is a mild, common form of unconjugated hyperbilirubinaemia associated with reduced bilirubin glucuronidation capacity. Analysis of the genetic basis of GS has allowed 2 forms to be independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 2 by independent of the syndrome is a mild form associated with a homozygous 3 by independent of the syndrome is a mild form associated with a homozygous 3 by independent of the syndrome is a mild form associated with a homozygous 3 by independent of the syndrome is a mild form associated with a homozygous 3 by independent of the syndrome is a mild form associated with a homozygous 3 by independent of the syndrom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Improving drug trial efficiency comprises identifying participants with Gilbert's syndrome - useful as their altered drug metabolism may hinder result interpretation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16-MAR-1996;

The present invention describes an in vitro method of diagnosis of a disease in an animal. The method comprises determining CC the genotype of an interleukin-6 (IL-6) gene in the animal. The invention also describes: (1) a method of identifying an animal predisposed or susceptible to a disease, comprising determining the genotype of an IL-6 gene in the animal; (2) a composition for use in C diagnosing a disease in an animal, the composition comprising one or more primer nucleic acid molecules adapted to amplify a portion of a 3' flanking region of an IL-6 gene in the animal predisposed or susceptible to a disease, the composition comprising one or more primer nucleic acid molecules adapted to amplify a portion of a 3' flanking region of an IL-6 gene in the animal. The method can be used for the diagnosis of carticularly of predisposition or susceptibility to a disease,

target general associated with particular diseases. The mutant variant represented by this sequence gives rise to Alport syndrome phenotype. The specification lists approximately 2500 genes that are target groups for the nucleotide probes of the invention. The probes are used to determine the genomic profile of an individual, particularly for:

(a) prognosis and management of disease (or determining susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  likelihood of developing disease.

Antibodies specific for the proteins encoded by the genes in the target list, can be used similarly. Identification of a core group of genes associated with disease, makes possible the use of genetic profiling as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence is an collagen IV alpha 3 deletion mutant fragment. The mutated gene is an example of a variant that can be detected using the nucleotide probes of the invention. The probes consist of complementary DNA or RNA for the detection of variants in a group of
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 27 BP; 7 A; 10 C; 3 G; 7 T; 0 other;

New isolated human polynucleotides

Claim 1; Page 375; 591pp; English.

CC by screening for differential expression in colon cancer. Dreast cancer CC and lung cancer cell lines. The polynuclectides of the invention are CC represented in AAX98275-X99118 and encode polypeptides of protein CC families selected from 4 transmembrane segments integral membrane compromers. Transmembrane receptors, ATPases associated with various CC cellular activities (AAA), eukaryotic aspartyl proteases, GATA family of CC diacylglycerol binding proteins, protein kinase, protein phosphatase 2C, CC signalling proteins and WM/Tsp5/WWP domain containing proteins. The CC encoded polypeptides also have a functional domain selected from Ank CC concodomain, Est-hand, SH3 domain, WD domain/G-beta repeats, zinc finger (CCHC class), and zinc-binding metalloprotease This invention describes novel isolated human polynucleotides obtained

The polynucleotides encode polypeptides with similarity to known protein families and are predicted to have similar properties. The novel polynucleotides can be used to develop products for use as therapeutic agents and in forensics, genetic analysis, mapping and diagnostic applications. In particular, the product can be used for the detection and management of cancers. They can be used for treating e.g, cervical cancers, melanomas, colorectal adenocarcinomas, Wilm's tumour, sarcomas, rethnoblastoma, myosarcomas, lung carcinomas, leukemias, such as chronic myelogenous leukemia, and lymphomas such as histiccytic lymphoma, anhydric chereditary ectodermal dysplasia, congenital alveolar dysplasia, cepithelial dysplasia, of the cervix, fibrous dysplasia of bone, and congenital constate of bone, and prostate or thyroid hyperplasias or pseudoepitheliomatous hyperplasia of the cervix, fibrous dysplasia of bone, and prostate or thyroid hyperplasias or pseudoepitheliomatous hyperplasia of the cervix.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

The present sequence is that of cDNA encoding human Goodpasture antigen (GP) DeltaIII/V (see AAY95921), an alternative form of human GP resulting from splicing out of exons III and V. The CDNA was obtained by subcloning a cDNA encoding the protein into a modified perish vector including an initiator Met. The invention relates to novel Goodpasture antigen binding proteins (GPBPs, see AAY95900-11), which bind to and phosphorylate the unique N-terminal region of human GP, and which are highly expressed in several

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cDNA was obtained by subcloning a cDNA encoding the protein into a modified pETISb vector including an initiator Met. The invention relates to novel Goodpasture antigen binding proteins (GPBPs, see AAY9500-11), which bind to and phosphorylate the unique N-terminal region of human GP, and which are highly expressed in several autoimmune conditions. Claimed methods for treating an autoimmune disorder, cell apoptosis or a tumour involve modifying the expression or activity of GPBP, especially using a GP-derived poptide, such as GPDeltaIII/IV/V or a nucleic acid sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                               CDS

                                  The present sequence is that of cDNA encoding human Goodpasture antigen (GP) DeltaIII (see AAYSS919), i.e. an alternative form of human GP resulting from splicing out of exon III. The cDNA was obtained by subcloning a cDNA encoding the protein into a modified to novel Goodpasture antigen binding proteins (GPBPS, see 1940n of human GP, and which are highly expressed in several autoimmune conditions. Claimed methods for treating an autoimmune and to not protein for the second conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The present sequence is that of cDNA encoding human Goodpasture antigen (GP) DeltaV (see AAY95918), i.e. an alternative form of human GP resulting from splicing out of exon V. The cDNA was obtained by subcloning a cDNA encoding the protein into a modified to novel Goodpasture antigen binding proteins (GPBPs, see AAY95900-11), which bind to and phosphorylate the unique N-terminal autoimmune conditions. Claimed methods for treating an autoimmune disorder, cell apoptosis or a tumour involve modifying the expression or activity of GPBP, especially using a GP-derived neartife annex a condition. Claim 25; Page 150-151; 158pp; English. Novel Goodpasture antigen binding proteins useful for diagnosing and treating autoimmune disorders, tumor, and preventing cell apoptosis

CC The present invention describes an isolated protein chosen from the NCI C domain of the alpha 1 alpha 2 or alpha 3 chains of type IV collagen or a fragment, analogue, derivative or mutant, which has anti-angiogenic properties. The anti-angiogenic proteins, multimers and chimeras are useful for inhibiting angiogenic activity in mammalian tissue, especially for treating diseases chosen from angiogenesis-dependent cancers, benign tumours, rheumatoid arthritis, diabetic retinopathy, psoriasis, coular angiogenesis diseases, osler-webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, adhesions, atherosclerosis, scheroderma, hypertrophic scars, cat scratch adhesions, atherosclerosis, scheroderma, hypertrophic scars, cat scratch stenosis, contraception and obesity. The compositions can be used to inhibit a disease characterised by analogenic activity, in conjunction

The invention relates to a medicine inhibiting angiogenesis, tumour growth or metastases, or endothelial cell interactions with the extracellular matrix, comprising contacting the cells or tissue with a polypeptide composition containing antagonists of specific integrin receptors. The methods and the antagonists are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes a human type IV collagen alpha chain monomer, designated alpha 3(IV)NCI. The invention relates to a method for

carcinomas, sarcomas, rhabdomyossrcoma, retinoblastoma, Ewing sarcoma, neuroblastoma, osteosarcoma or leukaemia). These are also applicable to treating non-tumourigenic diseases and conditions with accompanying undesired angiogenesis, e.g. diabetic retinopathy, rheumatoid arthritis, retinal neovascularisation, choroidal neovascularisation, muscular degeneration, corneal graft rejection, vitamin A deficiency, atopic complications, chronic inflammation or psoriasis. keratitis, Mycobacteria infections, chemical burns, Kaposi sickle cell anaemia, sarcoid, carotid obstructive disease, useful for treating diseases and conditions with accompanying undesired anglogenesis, e.g. solid and bicof-borne tumours (e.g. melanomas, for inhibiting angiogenesis, tumour growth or metastases, or endothelial cell interaction with the extracellular matrix. The antagonists are also Kaposi's sarcoma post-laser

Monitoring ct the global expression of genes from FF cells allows the production of discovered, possible functions of unknown open reading frames can be considered. The expression of genes can be used to study how FF cells and genes in culture conditions, environmental stress, spore compingenesis, recombination, metabolic or catabolic pathway can be engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an CC engineering. Using ESTs provides several advantages over genomic or catabolic pathway equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate canalysis of the results. AAF01478 to AAF11253 represents ESTs from Aspergillus oryzae; and CC niger; AAF11854 to AAF11858 represents ESTs from Aspergillus oryzae; and CC AAF14879 to AAF11853 represents ESTs from Trichoderma reesei, which are call general advantaged on the constitution of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Berka RM,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (NOVO ) NOVO NORDISK BIOTECH INC. Total number

ę,

```
pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hits satisfying chosen parameters:
